Syncthing

Started in 2013, **Syncthing** is a free and Open Source file synchronization client-server application implementing its own block exchange protocol. It replaces proprietary sync and cloud services (such as DropBox) with something open, trustworthy and decentralized. Your data is your data alone and you deserve to choose where it is stored, if it is shared with some third party and how it's transmitted over the Internet. The source code of Syncthing is available under the Mozilla Public license version 2.0. See also Why Syncthing is one of the components of WikiSuite.

Add Device
Device ID
WQ573QH-GQTMU3X-YUJHZ77-GOYR475-BSHH7LT-ICLCH4J-TUZZS7U-OD45KAK
The device ID to enter here can be found in the "Edit > Show ID" dialog on the other device. Spaces and dashes are optional (ignored). When adding a new device, keep in mind that this device must be added on the other side too.
Device Name
Other computer
Shown instead of Device ID in the cluster status. Will be updated to the name the device advertises if left empty.
Addresses
dynamic
Enter comma separated "ip:port" addresses or "dynamic" to perform automatic discovery of the address.
Use Compression
Compression is recommended in most setups.
Introducer
Any devices configured on an introducer device will be added to this device as well.
Share Folders With Device
Select the folders to share with this device.
