

JMAP

Please see: [blogpost16-WikiSuite-will-now-support-all-major-Linux-distros](#). While [ClearOS](#)'s mail stack is powered by [Cyrus IMAP](#), [Virtualmin](#)'s mail stack is with Dovecot, so we will focus on efforts there (As of 2022-10-31, Dovecot doesn't support JMAP yet). However, a new JMAP server in Rust has emerged: <https://stalw.art/jmap/>

See:

<https://forum.virtualmin.com/t/a-mail-server-that-supports-jmap-json-mail-access-protocol-to-replace-imap-smtp-carddav-and-caldav/126214>

Cyrus 3.2 with JMAP support was released in May 2020.

2019-08-16: The specifications for JMAP Email have been published by the Internet Engineering Task Force (IETF), marking a big victory for email tools now and in the future.

2019-02-02: [JMAP was presented at FOSDEM](#). Check out the video, and the slides with speakers' notes!

WikiSuite will add support for JMAP via a combination of contributions to [Cyrus](#), [Cypht](#) integrated in [Tiki Wiki CMS Groupware](#) and the [IETF standardization process](#). Please see: [Cyrus IMAP 3 and JMAP development](#)
