ClearOS: better segmentation of web spaces (permissions, data storage, etc.)

Status
⊗ Closed

Description
ClearOS: better segmentation of web spaces (permissions, data storage, etc.)

Reported by
Marc Laporte

Priority
2

Area
ClearOS (deprecated)

Details

- ~~Segmentation of permissions (problem with cron job) ->~~
  https://avan.tech/ClearOS-web-administration-by-non-roots-users done:
  https://github.com/clearos/app-flexshare/commit/923f616abf5fe3de0f1eef9aad7c5beba504cf7a
- Database: Easier way to create database with most common use case: with a user with the same name as DB, with full access to this database, but to nothing else (And only for this web space)
- ~~Standard location for non web accessible files so that Tiki uses this space when it detects it's on ClearOS.~~ ~~Ex:~~ done in latest 7.x

```
/var/www/virtual/example.org-files
/var/www/virtual/example.org-logs
/var/www/virtual/example.org-errors
in addition to:
/var/www/virtual/example.org
```

Or perhaps better (but we need to deal with upgrades so perhaps only on new installs)

```
/var/www/virtual/example.org/html
/var/www/virtual/example.org/files
/var/www/virtual/example.org/logs
/var/www/virtual/example.org/errors
```

Database: Easier way to create database with most common use case: with a user with the same name as DB, with full access to this database, but to nothing else (And only for this web space) -> This is being added to Tiki: https://sourceforge.net/p/tikiwiki/code/61258 (still a bug to fix as of today, but it's happening). And TRIM can already do this.
