Cypht

Cypht is a webmail client which supports JMAP (and IMAP of course) that was added to Tiki Wiki CMS Groupware version 20.x, and much improved in Tiki 21.x.

Cypht with Cyrus IMAP and http://sabre.io/ is the base of WikiSuite's mail stack. As of 2019-09, it is far less feature-complete than Kolab, but it is more tightly integrated. And over time, it will become feature-rich, as is the nature of Tiki's community and development model: Tiki is the Free / Libre / Open Source (FLOSS) Web application with the most built-in features. Please see https://dev.tiki.org/Email-as-a-first-class-citizen

Cypht has what you'd expect from a webmail client, and some very interesting features like aggregating email from multiple accounts.

Protect your account

When using Internet services, you deserve more choices and control.
To get the best experience, we strongly encourage you to set up these account protections:

- Two-factor verification (2FA) increases your security. Use it with an authenticator app, security device (U2F, Yubikey, or OTP), or a code sent to your phone. Set up 2FA.
- Aliases, alternate email addresses, give you control over who knows the real you. Use it to secure your account by making it harder to match a compromised password with your true email. Create aliases.
WikiSuite: The most comprehensive and integrated Open Source enterprise solution.

Welcome to Cypht
Add a popular E-mail source quickly and easily

- You have 1 IMAP source
- You don't have any POP3 sources
- You have 1 SMTP source
- RSS/ATOM services are not enabled for this site. Sorry about that!

Your timezone is set to Europe/Paris

Help
Cypht is a webmail program. You can use it to access your E-mail accounts from any service that offers IMAP, POP3, or SMTP access - which most do.

Site Settings

- General
  - Enable keyboard shortcuts
  - Show messages inline
  - Inline Message Style
    - Right
  - Outbound mail format
    - Plain text
  - Always BCC sending address
  - Language
    - English
  - Theme
    - White Bread (Default)
  - Timezone
    - Europe/Paris
  - Hide folder list icons
  - Allow handling of mailto links
  - Show icons in message lists
WikiSuite: The most comprehensive and integrated Open Source enterprise solution.

Key Features

- Combined inbox, unread, sent, and flagged message views for all your E-mail accounts (and RSS feeds), as well as standard E-mail client folder navigation
- Flexible profiles to combined IMAP accounts with SMTP accounts and setup signatures and reply to details
- Compose messages in plain text, HTML, or Markdown (markdown formatted messages are converted to HTML before being sent)
- Search all your E-mail accounts and RSS feeds at once with a simple form
- Simple interface translation system that does not use gettext or .po files, just arrays of translated strings defined in PHP. Right to left languages are supported.
- Module sets for IMAP, POP3, SMTP, LDAP or local contacts, WordPress, Github, and lots more! Check out the Modules page for a complete list.
- Sessions and user data can be stored in any PDO compatible database or flat files on the server
- Authentication is flexible and currently supports POP3, IMAP, LDAP, an included
database schema, dynamic authentication using popular E-mail providers, auto-discovery based on the user's E-mail domain, or you can roll your own with the site module set

- Sessions and Authentication can be customized without breaking any modules using the site module set
