Elasticsearch

Another change of policy:
https://www.elastic.co/blog/elasticsearch-is-open-source-again
https://www.reddit.com/r/programming/comments/1f4ealr/elasticsearch_is_open_source_again/

- Unfortunately, Elasticsearch is no longer Open Source: https://www.elastic.co/blog/licensing-change
- https://www.elastic.co/blog/license-change-clarification

Thus, the WikiSuite project moved to Manticore Search (starting in Tiki25). Elasticsearch still works well with Tiki, but the WikiSuite-Elasticsearch package is deprecated.

You can still install with the following command:

```
sudo apt-get install wikisuite-elasticsearch
```

But you shouldn't as you will get a no-longer supported version of Elasticsearch Version 6.8.23 (The last branch that was not re-licensed away from Open Source)
