Optional packages
Some packages that are built, but not part of the default installation.

Extra PHP versions
As of 2022-10-09, the WikiSuite installer provides PHP 7.2, 7.3, 7.4 and 8.1 which covers all currently supported Tiki versions and upcoming Tiki25.

You may have reasons to install other versions such as

- Run older versions of Tiki
- Run other PHP apps with these requirements
- etc.

And thus, you can easily added by running one or all of these commands:

```
sudo apt-get install wikisuite-php5.6
sudo apt-get install wikisuite-php7.1
sudo apt-get install wikisuite-php8.0
```
