

WikiSuite: The most comprehensive and integrated Open Source enterprise solution.

Virtualmin

Started in 2003, **Virtualmin** is a powerful and flexible web hosting control panel for Linux and BSD systems. It enhances Webmin (started in 1997), which is a web-based interface for system administration for Unix. Using any modern web browser, you can setup user accounts, email accounts, Apache, DNS, file sharing and much more. Virtualmin is a [key component of WikiSuite](#).

The WikiSuite install script uses Virtualmin as explained here: <https://gitlab.com/wikisuite/wikisuite-packages>

The screenshot displays the Virtualmin Virtual Servers management page. On the left is a navigation sidebar with options like 'Create Virtual Server', 'Edit Virtual Server', and 'List Virtual Servers'. The main content area shows a table of virtual servers. The table has the following data:

Domain name	Username	Description	Users	Aliases
<input type="checkbox"/> virtualmin.tualmin.com	proxy	Proxy to Virtualmin demo server	1 (List..)	Disabled
<input type="checkbox"/> demo.virtualmin.com	proxy	Alias of virtualmin-demo.virtualmin.com		Disabled
