

Optional packages

Some packages that are built, but not part of the default installation.

Extra PHP versions

As of 2023-08-28, the WikiSuite installer provides PHP 7.4, 8.1 and 8.2 which covers Tiki 24 LTS, 26 and upcoming Tiki 27 LTS

You may have reasons to install other versions such as

- Run older versions of Tiki
- Run other PHP apps with these requirements
- etc.

And thus, you can easily added by running one or all of these commands:

```
sudo apt-get install wikisuite-php5.6
sudo apt-get install wikisuite-php7.1
sudo apt-get install wikisuite-php7.2
sudo apt-get install wikisuite-php7.3
sudo apt-get install wikisuite-php8.0
```
