PHP code for Virtualmin

The WikiSuite installer is powered by Virtualmin, and installs Software Components.

Given Tiki Manager and Tiki Wiki CMS Groupware are in PHP, we'd like to leverage PHP code to interact with Virtualmin. This page is to research options.

Options

- https://github.com/search?o=desc&q=php+virtualmin&s=updated&type=Repositories
- https://packagist.org/?query=virtualmin

Our selection

After an analysis by Fabio, we have selected https://github.com/fintech-systems/virtualmin-api

Actions

Let's list the desired actions

From Tiki

- Create an email address for a tracker item (ex. a task)
- Configure Cypht for an existing email address

From Tiki Manager

- Virtual Server or Sub-Server
  - Create
  - Lock / unlock
