WikiSuite: The most comprehensive and integrated Open Source enterprise solution.

**Source Code**

The source code of each of the software components is available on their respective sites. For statistics on the source code (and other useful information), please see: Black Duck Open Hub. If you want to use WikiSuite (versus auditing and/or contributing to the source code), please see: How to install WikiSuite

WikiSuite's policy is to work closely with each upstream project to add / improve features there. See also: "Upstream First"

Some quick links to the various repositories:

**Other code which has been upstreamed**

- The WikiSuite project has helped several upstream projects to move to Bootstrap (good for the project, and makes it easier for WikiSuite to have a consistent look and feel)
WikiSuite: The most comprehensive and integrated Open Source enterprise solution.

- jQuery Gantt editor - major update, which will be added to Tiki 19
- CandyJS was converted to Bootstrap in version 2.2 although we have since switched to ConverseJS.
- https://github.com/vrana/adminer/pull/231
- Many others...

**XMPP and WebRTC related**

- **Tiki-Openfire plugin** (the corresponding part in Tiki has been added to the main code base, as it is done in Tiki to avoid plugin problems)
- The WikiSuite project is behind the revamp of **ofmeet** to use the latest version of Jitsi Meet and the jitsi-videobridge-openfire-plugin revamp. Please see: https://github.com/igniterealtime/ofmeet-openfire-plugin
- The WikiSuite project has participated to enhancements to the ConverseJS project
- Openfire's certificatemanager.jar was created to get automatic updates from Let's Encrypt.

**Other code planned**

- Several, including
  - Converting https://conversejs.org to Bootstrap 4. Done, will be released in Converse 4.0
  - etc. See [To do](#)
