Source Code

The source code of each of the [software components](#) is available on their respective sites. For statistics on the source code (and other useful information), please see : [Black Duck Open Hub](#). If you want to use WikiSuite (versus auditing and/or contributing to the source code), please see: [How to install WikiSuite](#)

WikiSuite's policy is to [work closely with each upstream project](#) to add / improve features there. See also: ["Upstream First"](#)

Some quick links to the various repositories:

Main repositories of each software component

  - https://github.com/fusionpbx/fusionpbx
- https://github.com/xibosignage/

Other code which has been upstreamed

- The WikiSuite project has helped several upstream projects to move to Bootstrap (good for the project, and makes it easier for WikiSuite to have a consistent look and feel)
- jQuery Gantt editor - major update, which will be added to Tiki 19
- CandyJS was converted to Bootstrap in version 2.2 although we have since switched to ConverseJS.
- https://github.com/vrana/adminer/pull/231
- Many others...

XMPP and WebRTC related

- Tiki-Openfire plugin (the corresponding part in Tiki has been added to the main code base, as it is done in Tiki to avoid plugin problems
- The WikiSuite project is behind the revamp of ofmeet to use the latest version of Jitsi Meet and the jitsi-videobridge-openfire-plugin revamp. Please see: https://github.com/igniterealtime/ofmeet-openfire-plugin
- The WikiSuite project has participated to enhancements to the ConverseJS project
- Openfire's certificatemanager.jar was created to get automatic updates from Let's Encrypt.

Other code planned

- Several, including
  - ~~Converting~~ https://conversejs.org ~~to Bootstrap 4~~ Done, will be released in Converse 4.0
  - etc. See To do

alias
