

WikiSuite: The most comprehensive and integrated Free / Libre / Open Source enterprise software suite ever developed

Why Not

We routinely get questions about why a component is picked or not picked for WikiSuite. When a [component](#) has a direct alternative, it will be explained on a page such as [Why Openfire](#). But in some cases, the potential app doesn't line up neatly with what we picked. This page is to explain.

SuiteCRM

“

SuiteCRM is a software fork of the popular customer relationship management (CRM) system from SugarCRM. The SuiteCRM project started when SugarCRM decided to stop development of its open-source version. The base SuiteCRM application is built on the last open-source SugarCRM release. SuiteCRM is a greatly extended version of SugarCRM which also contains many additional security fixes that are not available in SugarCRM.

SuiteCRM has tons of features that are geared towards the CRM use case.

- <https://docs.suitecrm.com/user/core-modules/>
- <https://suitecrm.com/solutions/role/marketing/>

We don't add to WikiSuite because there would be way too much overlap, and it would add complexity. Pretty much all these features are either

- available in [Tiki Wiki CMS Groupware](#)
- easily configurable via <http://tikitrackers.org/>
- and the few features that are missing, let's add them 😊

And we could collaborate with them on software libraries and emerging standards.

Dolibarr

Dolibarr is a CRM/ERP written in PHP with broad functionality.

We don't add to WikiSuite because there would be way too much overlap, and it would add complexity. Pretty much all these features are either

- available in [Tiki Wiki CMS Groupware](#)
- easily configurable via <http://tikitrackers.org/>
- and the few features that are missing, let's add them 😊

WikiSuite: The most comprehensive and integrated Free / Libre / Open Source enterprise software suite ever developed

And we could collaborate with them on software libraries and emerging standards.

Dolibarr has gone the plugin route: <https://www.dolistore.com/> where as in WikiSuite, we prefer integrated solutions to avoid <http://pluginproblems.com>

Odoo

Why not use Odoo for the Accounting functionality of WikiSuite? Please see [WikiSuite vs Odoo](#).
