

# To do

|   | Description                                                                                                                               | Assigned to       | Priority |
|---|-------------------------------------------------------------------------------------------------------------------------------------------|-------------------|----------|
| ● | Review all listings                                                                                                                       | M. Bilal Siddiq   | 2        |
| ① | Review User Tracker                                                                                                                       | M. Bilal Siddiq   | 2        |
| ● | Get 90 seconds video, to be shared on social media                                                                                        | Marc Laporte      | 2        |
| ● | Realtime Tiki: Replicate the functionality of TogetherJS (for realtime collaboration on all forms) instead of standalone instance or SaaS | Victor Emanouilov | 2        |
| ● | Make a WikiSuite slideshow, dogfooding of course                                                                                          | M. Bilal Siddiq   | 2        |
| ● | Revamp home page when we get video (and add more text about benefits like no lock-in)                                                     |                   | 2        |
| ● | Permit Openfire Meetings to anonymous users for certain rooms                                                                             |                   | 2        |
| ● | WikiSuite development environment                                                                                                         |                   | 2        |
| ① | Implement Multi-factor authentication (MFA) for all apps                                                                                  |                   | 2        |
| ● | WikiSuite demo instance (refreshed periodically)                                                                                          |                   | 2        |
| ● | Permit to phone in and out of a WebRTC videoconference                                                                                    | guus.der.kinderen | 2        |
| ● | Migrate all relevant content from <a href="https://suite.tiki.org/Tiki+Suite">https://suite.tiki.org/Tiki+Suite</a>                       | Marc Laporte      | 3        |
| ● | Set up Dogfood server (XMPP, Piwik, etc.)                                                                                                 |                   | 3        |
| ① | Improve --Make-- a proper description of alternatives, and explain how WikiSuite is different                                             |                   | 3        |
| ● | Complete Branding document and guide                                                                                                      |                   | 3        |
| ● | Dogfood: preview side-by-side diff: blank instead of diff                                                                                 | jonny.bradley     | 3        |
| ● | Explicit community model and how to get involved                                                                                          |                   | 3        |
| ● | Mailing lists without Mailman, using only Tiki and Mail aliases                                                                           |                   | 3        |
| ● | Explain why each component                                                                                                                | Marc Laporte      | 3        |
| ● | Document logging, monitoring and alerting options                                                                                         |                   | 3        |

|   | Description                                                                                                                           | Assigned to     | Priority |
|---|---------------------------------------------------------------------------------------------------------------------------------------|-----------------|----------|
| ● | Anonymous users do not have edit rights, and thus not be offered inline edits                                                         | jonny.bradley   | 3        |
| ● | Openfire XMPP chat and video logs to be searchable, and accessible to Tiki                                                            |                 | 3        |
| ● | Cyrus data (IMAP/JMAP mailboxes, but perhaps also Contacts and Events) to be accessible to Elasticsearch and Tiki                     |                 | 3        |
| ● | Explore adding features to Remote Control app (ex.: Screencast)                                                                       |                 | 3        |
| ● | Extend Syncthing in WikiSuite to offer the functionality of Seafile, OwnCloud, etc. (Virtualmin, Tiki and Syncthing interoperability) |                 | 3        |
| ● | Set up proper onboarding process                                                                                                      |                 | 3        |
| ● | Translate wikisuite.org to French                                                                                                     |                 | 4        |
| ● | Translate wikisuite.org to Spanish                                                                                                    |                 | 4        |
| ● | Elaborate and document strategy with all Social Media accounts we have (Twitter, etc.)                                                |                 | 4        |
| ● | Strategy to attract service providers                                                                                                 |                 | 4        |
| ● | WikiSuite Orchestrator                                                                                                                |                 | 4        |
| ● | Interoperability between Tiki Wiki CMS Groupware and Openfire                                                                         |                 | 4        |
| ● | Build an awesome CRM, with all relevant components working smartly together                                                           |                 | 4        |
| ● | XMPP presence indicator in webmail, and mini-chat                                                                                     |                 | 4        |
| ● | Add Team functionality to password management (web access to KeePass data)                                                            |                 | 4        |
| ● | Test FusionPBX with SQLite                                                                                                            |                 | 4        |
| ● | Xibo support on CentOS 7.x (ex.: via Docker)                                                                                          |                 | 4        |
| ● | YouTube page                                                                                                                          | M. Bilal Siddiq | 4        |
| ● | Set up proper community channels                                                                                                      |                 | 4        |

|   | Description                                                                                     | Assigned to | Priority |
|---|-------------------------------------------------------------------------------------------------|-------------|----------|
| ● | Investigate for a solution to permit self-hosting without a fixed IP address (such as PageKite) |             | 4        |
| ● | Dogfood WikiSuite for Community Conference Calls                                                |             | 4        |
| ● | Add WikiSuite.org/Benefits inspired by tiki.org/Benefits                                        |             | 4        |
| ● | Jitsi Meet: Pre-flight checklist like BigBlueButton                                             |             | 4        |
| ● | Make a contact tracker (instead of emailing project founder)                                    |             | 5 (low)  |
| ● | Make a series of screencasts to show off the most important features                            |             | 5 (low)  |
| ● | Test and document the Jitsi - Tiki provisioning in the context of WikiSuite                     |             | 5 (low)  |
| ● | Content filters on server applied to Tiki content to detect posting of bad content              |             | 5 (low)  |
| ● | Openfire Meetings planner to be a resource calendar in Tiki                                     |             | 5 (low)  |
| ● | Use Tiki categories and/ or tags outside of Tiki (ex.: Emails, Files, etc.)                     |             | 5 (low)  |
| ● | Tiki Newsletters and Cyrus IMAP interoperability                                                |             | 5 (low)  |
| ● | Add a Chatbot to WikiSuite                                                                      |             | 5 (low)  |
| ● | WikiSuite Blockchain prototype                                                                  |             | 5 (low)  |
| ● | Address the software development use case (Gitea vs Gitlab vs Tuleap vs Allura vs ...)          |             | 5 (low)  |
| ● | Online shop for promotional items                                                               |             | 5 (low)  |
| ● | Add a proofreading tool to WikiSuite (Grammar, spelling, etc.)                                  |             | 5 (low)  |
| ● | Consider OCS Inventory NG to be a WikiSuite Component                                           |             | 5 (low)  |
| ● | Investigate tools to facilitate management on the command line                                  |             | 5 (low)  |
| ● | Look into <a href="https://reproducible-builds.org">https://reproducible-builds.org</a>         |             | 5 (low)  |

|   | Description                                                                                                                                           | Assigned to | Priority |
|---|-------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|----------|
| ✖ | Create ClearOS app for Syncthing                                                                                                                      |             | 4        |
| ✖ | Create ClearOS app for WikiSuite                                                                                                                      |             | 3        |
| ✖ | prism-break.org : Propose a new category for suites                                                                                                   |             | 2        |
| ✖ | Convert Kolab admin panel to Bootstrap                                                                                                                |             | 5 (low)  |
| ✖ | Create a Kolab app for ClearOS                                                                                                                        |             | 4        |
| ✖ | Create ClearOS app for TRIM, from which to install Tiki                                                                                               |             | 2        |
| ✖ | Create ClearOS app for Matomo                                                                                                                         |             | 5 (low)  |
| ✖ | Create ClearOS apps for FusionPBX and FreeSWITCH                                                                                                      |             | 5 (low)  |
| ✖ | Files on disk (can be in ClearOS's FlexShare and or Syncthing) to be accessible to Elasticsearch and Tiki                                             |             | 3        |
| ✖ | FusionPBX / FreeSWITCH access to ClearOS OpenLDAP / Tiki address book                                                                                 |             | 5 (low)  |
| ✖ | run mysql_secure_installation in unattended mode at wikisuite install time (after mariadb)                                                            |             | 2        |
| ✖ | Syncthing and Kolab interoperability                                                                                                                  |             | 5 (low)  |
| ✖ | ClearOS Web Server: When creating or editing a web space, it should be possible to pick PHP versions (7.1 vs 7.0 vs 5.6)                              |             | 2        |
| ✖ | Fail2ban should be checked in clearos (attack detector) to ensure the correct param are set to prevent more than just a few (<10) connection attempts |             | 2        |
| ✖ | Timezone issue between Kolab and Outlook                                                                                                              |             | 3        |
| ✖ | Roundcube: Add a "send and archive" or "reply and archive" button                                                                                     |             | 3        |
| ✖ | Add H5P support to Openfire and Tiki                                                                                                                  |             | 3        |
| ✖ | Kolab calendar updates on Android (DAVdroid): email notifications are not being sent                                                                  |             | 4        |

|   | Description                                                                                                                  | Assigned to        | Priority |
|---|------------------------------------------------------------------------------------------------------------------------------|--------------------|----------|
| ✖ | ClearOS: better segmentation of web spaces (permissions, data storage, etc.)                                                 |                    | 2        |
| ✖ | ReferenceError: SpiceMainConn is not defined when trying to use Spice on Kimchi app for ClearOS (VNC is fine)                |                    | 3        |
| ✖ | ClearOS and Kimchi: try to find a way in the GUI for Kimchi to use an external DHCP server                                   |                    | 4        |
| ✖ | Make app-kimchi Check and Fix Missing KVM Settings                                                                           |                    | 2        |
| ✖ | Picking PHP Version for Crontab Scripts                                                                                      |                    | 2        |
| ✖ | ClearOS in Gateway Mode Refuses to Route KVMs                                                                                |                    | 2        |
| ✖ | Attack detector (Fail2ban) for ClearOS: add more info and options to admin panel                                             |                    | 5 (low)  |
| ✖ | upgrade wikisuite.org to 16.x                                                                                                | benoit.roy         | 1 (high) |
| ✖ | Convert ConverseJS to Bootstrap 4                                                                                            | benoit.roy         | 3        |
| ✖ | Build relevant top menu                                                                                                      | M. Bilal Siddiq    | 1 (high) |
| ✖ | Create ClearOS app for Openfire Meetings                                                                                     | guus.der.kinderen  | 2        |
| ✖ | Update Openfire Meetings to latest version of Jitsi Meet, and make sure all new features are made available (ex.: Streaming) | guus.der.kinderen  | 1 (high) |
| ✖ | Convert Jitsi Meet to Bootstrap                                                                                              | Lukas 'luci' Masek | 2        |
| ✖ | Convert Openfire admin panel to Bootstrap                                                                                    | Manassé Ngudia     | 5 (low)  |
| ✖ | Make development plan with ClearOS core team                                                                                 | Marc Laporte       | 1 (high) |
| ✖ | Document how to configure Content Delivery Network for Tiki and ClearOS                                                      | Marc Laporte       | 5 (low)  |
| ✖ | Participate to Roundcube Next and JMAP integration                                                                           | Marc Laporte       | 2        |
| ✖ | IMAP folder tracker field type                                                                                               | Victor Emanouilov  | 3        |
