Area

Tiki Wiki CMS Groupware

Virtualmin

Details

We want <https://doc.tiki.org/Forum-and-Mailing-List-Synchronization> without installing Mailman

What needs to be developed, if anything?

Mail aliases are essential

- Some ideas
 - Bounce management
 - Check for any desired features from <http://www.sympa.org/overview/features>
 - From Tiki forum, could be a hook to create email account.
 - Self-register to site, with username/email or email as username
 - Join Tiki group joins mailing list (This group is also synched with mail aliases)
 - Reply to list, or just to member who sent message?
 - Moderate messages depending on prefs / condition
 - Group membership
 - Size of message
 - IMAP mail account
 - Mails sent to this account are sent to all group members
 - Mails sent to the group have a "reply-to" to the list
 - Moderation feature should be kept (it's already a forum feature)
 - Any spam / virus filters on the IMAP account should work
