Description
Mailing lists without Mailman, using only Tiki and Mail aliases

Reported by
Marc Laporte

Priority
3

Area
Tiki Wiki CMS Groupware
Virtualmin

Details
We want https://doc.tiki.org/Forum-and-Mailing-List-Synchronization without installing Mailman

What needs to be developed, if anything?
Mail aliases are essential

- Some ideas
  - Bounce management
  - Check for any desired features from http://www.sympa.org/overview/features
  - From Tiki forum, could be a hook to create email account.
  - Self-register to site, with username/email or email as username
  - Join Tiki group joins mailing list (This group is also synched with mail aliases)
  - Reply to list, or just to member who sent message?
  - Moderate messages depending on prefs / condition
    - Group membership
    - Size of message
  - IMAP mail account
    - Mails sent to this account are sent to all group members
    - Mails sent to the group have a "reply-to" to the list
    - Moderation feature should be kept (it's already a forum feature)
    - Any spam / virus filters on the IMAP account should work
