Description
Explore adding features to Remote Control app (ex.: Screencast)

Reported by
Marc Laporte

Priority
3

Area
Realtime (Openfire/Jitsi Meet)

Details
Now that we have a system tray / desktop app via remote desktop control, let's do more:

* New message in chatroom
* New email received
* Play voice mail, audio and video podcasts
* Batch file uploader
* Screencast
* etc.

Screen capture and upload to Tiki File Gallery to be annotated via Tiki and then promoted with Tiki Share
