Description

Xibo support on CentOS 7.x (ex.: via Docker)

Reported by

Marc Laporte

Priority

4

Area

ClearOS (deprecated)

Xibo

Details

Here is current doc to install Xibo:

http://xibo.org.uk/manual-tempel/en/install_environment.html

So the reference process is on Ubuntu. Let's see how to document for CentOS 7.x (and thus make it easier later for the ClearOS app)

- Concerns: PHP 5.5 (CentOS 7.x ships with PHP 5.4)
- <http://zeromq.org/> which is a PPA (Ubuntu)

Dan Garner and Marc Laporte agreed on 2016-07-13 to proceed with Docker:

<https://github.com/xibosignage/xibo-docker>

<https://hub.docker.com/r/xibosignage/>
